Aim:-

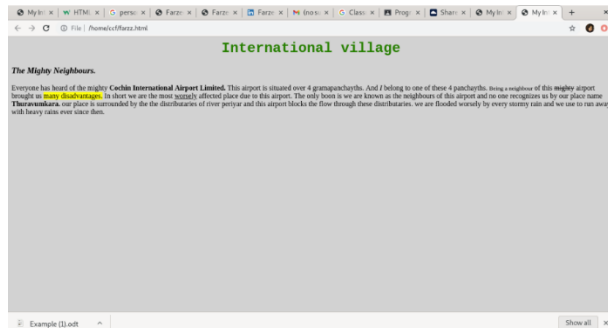

Model a simple HTML file related to your native place to demonstrate the usage of different tags

Source code:-

```
<html>

<h3><i> The Mighty Neighbors.</i> </h3>
<p>Everyone has heard of the mighty <b> Cochin International Airport
Limited.</b> This airport is situated over 4 gramapanchayths. And<em> I </em>
belong to one of these 4 panchayths. <small>Being a neighbor </small>of this <del>
mighty</del> airport brought us <mark>many disadvantages.</mark> In short we are
the most <ins>hoarsely</ins> affected place due to this airport. The only boon is we
are known as the neighbors of this airport and no one recognizes us by our place name
<strong>Thuravumkara.</strong> our place is surrounded by the the distributaries of
river periyar and this airport blocks the flow through these distributaries. we are
flooded hoarsely by every stormy rain and we use to run away with heavy rains ever
since then.</p>

PERSONAL DETAILS:

- Name: Text input field
- Address: Text input field
- Contact Number: Text input field
- Email: Text input field
- Date of Birth: Text input field with a date picker icon (dd/mm/yyyy)
- Gender: Radio buttons for Male, Female, Others, and Prefer not to say
- Nationality: Text input field
- Religion: Dropdown menu with "-- select an option --"
- Father's Name: Text input field
- Mother's Name: Text input field
- Annual Income: Text input field

ACADEMIC DETAILS:

- Entrance Rank (if available): Text input field
- 10th %: Text input field
- 12th %: Text input field
- Graduated in: Dropdown menu with "-- select an option --"
- Degree Percentage: Text input field

At the bottom of the form, there are two buttons: SUBMIT and RESET.
